

Industrial Polishing System

This industrial polishing system is designed for precision surface finishing. It is suitable for applications such as nail polishing, wood engraving, and mould polishing.

Product Overview

Precision Industrial Polishing Solution

This industrial polishing system is a comprehensive solution designed for high-precision surface finishing and material processing. It features a central control unit with integrated power supply and adjustable parameters to ensure optimal results. The system is engineered for versatility, making it suitable for applications ranging from jewelry engraving and mould polishing to circuit board drilling and denture preparation.

Applications

Primary Applications

Nail Art, Wood Engraving, Craft Carving, Denture Polishing, Jewelry Engraving, Mould Polishing, Precision Parts Carving, Circuit Board Drilling

System Components

Included Components

- Central control unit with power supply
- Two high-precision handpieces
- Foot pedal for hands-free operation
- Integrated filtration unit

Control Features

Adjustable settings • User-friendly interface • Speed control • Hands-free operation
