

Industrial Power Generator

This heavy-duty industrial generator is designed for reliable power generation. It features a powerful engine, a durable alternator, and a comprehensive control panel for easy operation and monitoring.

Overview

Industrial Power Generation

This heavy-duty industrial generator is engineered for reliable, long-term power supply in demanding environments. Featuring an advanced electronic management system, the unit optimizes engine performance to achieve industry-leading fuel efficiency and extended maintenance intervals. Its robust design ensures stable operation with minimal vibration and noise, making it an ideal dependable power source for diverse commercial and industrial applications.

Performance Metrics

Minimum Fuel Consumption

189 g/kWh

Fuel Consumption

First Overhaul Time

30000 hours

Technical Features

Key Operational Benefits

- Stable operation with small vibration
- Low noise emissions
- Extended service life
- Energy saving and environmental protection

Electronic Management

Advanced ADEC electronic management system for intelligent engine optimization

Compliance

Emission Standards Compliance

TA-Luft, US EPA, CARB, EU-III
