

# Industrial Pressure Reducing Valve with Diaphragm Actuator

This industrial valve regulates pressure in fluid or gas systems. It features a diaphragm actuator, flanged connections, and a pressure adjustment mechanism.

## Product Overview

### Industrial Pressure Regulation Solution

This industrial pressure reducing valve is engineered for precise fluid and gas system management, featuring a robust diaphragm actuator for reliable performance. Designed for durability in demanding industrial environments, the unit incorporates flanged connections to ensure secure and straightforward pipeline integration. The inclusion of a manual override handle provides operators with essential control during maintenance or emergency shut-off procedures.

## Technical Specifications

Component Type	Pressure Reducing Valve
Actuator Type	Diaphragm Actuator
Connection Style	Flanged

## Key Features

### Control Mechanism

Manual Shut-off • Pressure Adjustment

Key Features	Manual Override, Pressure Regulation, Industrial Grade, Flanged Connection
