

Industrial Radar Level Transmitter

This industrial radar level transmitter provides continuous level measurement in tanks and vessels. It features stainless steel construction and a conical antenna for focused signal transmission, suitable for demanding environments.

Product Overview

Industrial Radar Level Transmitter

This industrial radar level transmitter is engineered for continuous, high-precision level measurement in tanks and vessels. Constructed with robust stainless steel and a focused conical antenna, it ensures reliable signal transmission even in demanding industrial environments. The device is versatile, capable of providing accurate readings for a wide range of liquid and solid materials.

Technical Specifications

Environment

Demanding Industrial

Measurement Type

Continuous level measurement

Construction Material

Stainless steel

Antenna Type

Conical antenna

Suitable Materials

Liquids, Solids
