

Industrial Refrigeration and Ventilation System

This system provides both refrigeration and ventilation for industrial applications. The equipment is designed for maintaining controlled environments in industrial or commercial settings.

Product Overview

Industrial-Grade Climate Control

This professional-grade industrial refrigeration and ventilation system is engineered for reliable, high-capacity temperature management. Designed for robust outdoor installation, these units feature protective grilles and durable construction to withstand demanding commercial environments. The system offers scalable configuration options to meet specific capacity requirements for maintaining precisely controlled industrial cooling environments.

Technical Specifications

Primary Applications

- Industrial refrigeration
- Commercial climate control
- Temperature-sensitive storage

Installation

Outdoor

Key Design Features

Protective Grille, Weather-Resistant Construction, Modular Configuration
