

Industrial Refrigeration and Ventilation Unit

This industrial refrigeration and ventilation unit is designed for commercial or industrial applications. It is suitable for maintaining controlled environments in various settings with its multi-panel filter section for air purification and a robust cabinet.

Overview

Industrial Climate Control Solution

This industrial refrigeration and ventilation unit is engineered for demanding commercial and industrial environments. It integrates advanced air purification through a multi-panel filter section with a high-capacity compressor to maintain precise controlled environments. The unit features a robust cabinet construction designed for durability and long-term performance in varied operational settings.

Technical Features

Primary Functions	Industrial Refrigeration, Industrial Ventilation, Air Purification
Filtration Technology	Multi-panel filter section

Construction

Cabinet Construction	Robust cabinet housing for mechanical components and compressor
----------------------	---

Applications

Suitable Environments

- Commercial facilities
- Industrial warehouses
- Controlled environment zones
