

# Industrial Refrigeration and Ventilation Unit

This robust unit provides both refrigeration and ventilation for industrial applications. It is constructed with durable materials and a modular design, featuring circular ventilation holes and threaded pipe connections for temperature control.

## Product Overview

### Industrial-Grade Cooling and Ventilation

This robust refrigeration and ventilation unit is engineered for demanding industrial environments requiring consistent temperature control and air circulation. Built with high-quality stainless steel, the modular design ensures durability and ease of integration into existing systems. It features optimized ventilation pathways and precise threaded connections to maintain reliable performance under continuous operation.

## Physical Construction

Material	Stainless Steel
Design Features	Modular, Industrial-Grade, Corrosion Resistant

## System Integration

Ventilation	Top-surface circular ventilation ports
Input/Output Connections	Threaded pipe connections for coolant/refrigerant

## Performance

### Key Performance Indicators

<b>1 Qty</b> Coolant Input Port	<b>1 Qty</b> Coolant Output Port
