

Industrial Refrigeration and Ventilation Unit

Industrial refrigeration and ventilation unit designed for efficient cooling and air circulation. It features a robust metal enclosure and a visible heat exchanger or cooling coil.

Product Overview

Industrial-Grade Climate Control

This industrial refrigeration and ventilation unit is engineered for reliable, high-performance cooling and air circulation in demanding environments. Built with a durable metal enclosure, it offers excellent corrosion resistance and long-term operational stability. The integrated heat exchanger system supports precise control of temperature and humidity, making it an ideal solution for specialized industrial facilities requiring consistent climate regulation.

Technical Specifications

Cooling System Type	Direct Expansion (DX) or Chilled Water
Installation Method	Ceiling or Duct Mounted
Construction Material	Stainless Steel, Coated Steel

Performance Features

Core Capabilities

- Efficient air circulation
- Precise temperature regulation
- Humidity control
- Corrosion-resistant chassis
