

Industrial Refrigeration and Ventilation Unit

This self-contained unit provides both refrigeration and ventilation for industrial applications. Its compact design includes integrated cooling fans and a robust housing, ensuring durability and easy integration.

Product Overview

Industrial Efficiency

This self-contained refrigeration and ventilation unit is engineered for demanding industrial applications requiring precise temperature management. Its compact, robust design ensures durability in harsh environments while facilitating straightforward installation through integrated external connection points. The unit effectively combines cooling performance with ventilation capabilities to support seamless integration into existing infrastructure.

Technical Features

Key Features

Self-contained, Industrial Grade, Compact Design, Integrated Cooling Fans, Robust Housing

Integration

Equipped with external connection points for rapid and easy integration into existing industrial systems.

Application

Suitable Environments

- Temperature control in industrial facilities
- Ventilation-reliant work spaces
- System-integrated cooling setups
