

Industrial Screw Air Compressor

This industrial air compressor is designed with a robust construction and an advanced control panel for real-time monitoring. Integrated safety mechanisms ensure reliable and safe operation for various industrial applications.

Product Overview

Industrial-Grade Performance

The IBL10A screw air compressor is engineered for continuous operation and high-efficiency performance in demanding industrial environments. Featuring a robust, fashion-forward design, this unit utilizes high-grade copper components to ensure longevity and superior lubricity. Each unit undergoes rigorous 100% factory testing at full pressure to guarantee the highest standards of reliability and operational safety.

Technical Specifications

Quality Assurance

100% Factory Tested • Full Pressure Certified

Material Specifications

High-grade Copper Cylinder, Robust Steel Frame

Performance Features

Key Advantages

- Stable pump and motor performance for extended longevity
- Advanced screw compression mechanism
- Integrated real-time monitoring control panel
- Built-in safety protection mechanisms
