

Industrial Sewing Machine for Garments and Shoes

This industrial sewing machine is designed for manufacturing garments, shoes, and accessories. The robust machine is engineered for high-volume production and precision stitching.

Overview

Industrial Sewing Machine for Garments and Shoes

This industrial sewing machine is specifically engineered for high-volume manufacturing environments, including garment and shoe production. It features a robust, heavy-duty motor designed for continuous operation and precision stitching across a variety of material types. With adjustable stitch controls and a specialized needle system, this equipment offers the reliability and durability required for professional workshops and factories.

Technical Specifications

Adjustability

- Adjustable stitch length
- Adjustable stitch width

Motor Type	Heavy-duty
Application Areas	Garment Manufacturing, Shoe Production, Accessory Manufacturing
Needle System	Specialized multi-fabric system

Performance

Production Suitability

High-Volume • Industrial Use
