

Industrial Sewing Machine for Garments and Shoes

This industrial sewing machine is engineered for high-volume production in garment and shoe manufacturing. The machine features a robust construction for durability and provides precise, consistent stitching results.

Product Overview

Industrial Sewing Solution

This industrial sewing machine is engineered specifically for high-volume manufacturing environments, including garment, shoe, and accessory production. Designed for durability and consistent output, it features advanced mechanisms for efficient material handling and precise stitch formation. It is an essential tool for professional textile and apparel production lines requiring reliability.

Technical Specifications

Model Number	GK31010-17
Primary Applications	Garment Manufacturing, Shoe Production, Accessories, Textile Industry

Operational Features

Performance Features

- High-volume production capacity
- Robust construction for durability
- Precise stitch formation
- Efficient material handling
