

Industrial Sewing Machine for Garments and Shoes

This industrial sewing machine is designed for manufacturing garments, shoes, and accessories. It ensures precise and efficient stitching for a variety of materials.

Product Overview

High-Performance Industrial Sewing Solution

This industrial sewing machine is engineered specifically for the demanding environments of garment, shoe, and accessory manufacturing. Built for durability and reliability, it ensures precise, efficient stitching across a wide variety of materials. It is an essential asset for professional production lines requiring consistent high-quality output.

Technical Specifications

Model ID	BS457A
Series Class	457

Application

Primary Applications	Garment Manufacturing, Shoe Production, Accessories Assembly
----------------------	--

Performance Features

Key Benefits

- High-performance motor for continuous operation
- Robust construction for industrial durability
- Precise stitching control
- Versatile material handling capability
