

Industrial Sewing Machine for Shoe and Garment Production

This industrial sewing machine is designed for manufacturing garments, shoes, and accessories. It features adjustable settings and precision stitching mechanisms for various fabric types.

Overview

High-Performance Industrial Sewing Solution

This industrial sewing machine is engineered specifically for the demanding requirements of shoe and garment manufacturing. Built for continuous operation in high-volume production environments, it delivers precision stitching and reliable performance across various fabric types and thicknesses. Its robust construction and adjustable settings ensure consistent quality and durability for complex manufacturing tasks.

Technical Specifications

Key Capabilities

- Robust build for continuous operation
- Precision stitching mechanisms
- Adjustable settings for varied fabric thicknesses
- Multi-thread spool support
- Complex stitching pattern capability

Model Identifier	GK32000
Primary Applications	Garment Manufacturing, Shoe Production, Accessory Manufacturing

Performance Metrics

Operational Suitability

100 %

Duty Cycle
