

Industrial Sewing Machine for Textile Applications

This industrial sewing machine is designed for various textile applications. It features a robust build, adjustable settings, and a user-friendly interface.

Overview

Industrial Precision for Textile Production

This industrial sewing machine is engineered for high-volume textile manufacturing and intricate sewing operations. Built for performance in demanding environments, it features robust construction and precision mechanics to ensure consistent, high-quality stitch results. Its user-friendly interface allows for rapid adjustments, supporting efficiency in professional production workflows.

Technical Specifications

Key Performance Metrics

100 Level
Duty Rating

Model Number	BS20E-100
Application Type	Industrial, Textile Manufacturing, High-Volume Production

Features

Operational Capabilities

- Robust build quality for long-term durability
- Precision-engineered for consistent stitch quality
- Adjustable settings for versatile textile tasks
- User-friendly interface for streamlined operation
