

Industrial Sintering Furnace

This industrial sintering furnace is used in metallurgical processes for agglomerating fine particles into a solid mass using heat. The machine utilizes a large conveyor system with a wide bed for continuous material processing.

Overview

Industrial Sintering Solution

This industrial sintering furnace is engineered for high-capacity metallurgical processing, specifically designed to agglomerate fine particles into a solid, durable mass through controlled heat application. Featuring a robust conveyor-based design, it ensures consistent material throughput and uniform thermal treatment. It is an ideal solution for large-scale industrial operations requiring reliable and efficient sintering performance.

Technical Specifications

Sintering Area

60 m²

Total Sintering Area

Process Type

Metallurgical • Agglomeration • Continuous Conveyor
