

Industrial Solenoid Valve for Fluid/Gas Control

This solenoid valve is designed for precise control over fluid or gas flow in industrial applications. Its robust construction includes a finned aluminum body for efficient heat dissipation and a black plastic electrical connector for easy integration.

Product Overview

Industrial Fluid and Gas Control

This industrial solenoid valve is engineered for precise flow regulation in demanding fluid and gas control systems. Featuring a robust design with a finned aluminum body, it ensures efficient heat dissipation during continuous operation. The unit is built for reliable performance and easy integration into pneumatic and hydraulic infrastructures via its standardized electrical connection.

Technical Specifications

Body Material	Finned Aluminum
Compatible Systems	Pneumatic, Hydraulic
Mounting Configuration	Circular base with multi-bolt secure mounting
Electrical Interface	Black plastic electrical connector
