

Industrial Steering Gearbox

This steering gearbox is designed for robust performance in industrial settings. It features a durable housing with multiple mounting points and steel shafts for transmitting rotational motion.

Product Overview

Industrial Grade Steering Gearbox

This industrial steering gearbox is engineered for precise motion control and reliable performance in demanding mechanical systems. Featuring a durable cast metal housing and robust steel shaft components, it ensures long-term operational integrity. The right-angle design allows for versatile integration, making it an ideal component for complex industrial steering or torque transmission applications.

Technical Construction

Housing Material	Cast Metal
Shaft Configuration	Three-shaft right-angle arrangement
Shaft Material	Steel

Features

Key Features

- Robust cast metal housing
- Compact form factor
- Multiple mounting points
- Integrated lubrication system

Application

Primary Applications	Industrial Machinery, Steering Systems, Motion Control, Mechanical Transmission
----------------------	---
