

Industrial Textile Processing Machinery

These industrial machines are used in textile processing applications. They facilitate various operations in the textile manufacturing industry.

Product Overview

Industrial Textile Processing Solution

This large-scale industrial textile processing machinery is engineered for high-capacity production environments. It features a parallel array of cylindrical rollers and processing units optimized for heavy material handling. Integrated with overhead crane systems and designed for specialized industrial facility requirements, this equipment ensures robust performance in intensive manufacturing workflows.

Technical Configuration

Primary Processing Units	24 rollers
Integrated Handling Systems	Overhead Crane System, Parallel Processing Rows, Heavy Duty Conveyance

Facility Requirements

Installation Site Specs

- High ceiling clearance required
- Grid-structured industrial flooring
- Utility access underneath flooring
- Integrated crane gantry support
