

Industrial Therm Diffusion Production Line

This automated therm diffusion production line is designed for various industrial applications. It integrates pretreatment, heating, coating, and cooling stages to ensure consistent, high-quality results.

Product Overview

Industrial Therm Diffusion Production Line

This industrial-grade therm diffusion production line is engineered for high-performance surface treatment and material coating. Designed to withstand rigorous industrial usage, the system provides exceptional anti-corrosion protection that exceeds 1000 hours in salt spray testing. With a flexible production capacity ranging from 1 to 12 tons per shift, it is an ideal solution for manufacturing facilities requiring consistent, high-quality output.

Performance Metrics

Production Capacity

1 Ton/Shift

Minimum Capacity

12 Ton/Shift

Maximum Capacity

Salt Spray Rating

1000 hours

System Configuration

Process Capabilities

- Pretreatment
- Heating
- Coating
- Cooling

Key Features

Industrial Scale, Automated System, High Durability, Corrosion Resistant
