

Industrial Vacuum Circuit Breaker

This vacuum circuit breaker is designed for industrial applications requiring robust protection. It protects electrical equipment from overcurrent and short circuits using vacuum interrupters.

Product Overview

Industrial High-Voltage Protection

The VH4-40 is a robust, high-voltage circuit breaker engineered for demanding industrial environments and medium-voltage power distribution systems. It utilizes advanced vacuum interrupter technology to ensure reliable arc extinguishing and superior electrical protection. Designed for durability and safety, this three-phase unit provides high interrupting capacity with extended service life, making it ideal for protecting critical electrical infrastructure.

Technical Specifications

Key Operational Features

- Individually insulated phases
- Remote operation capabilities
- Remote monitoring support
- High interrupting capacity

Circuit Breaker Type	Vacuum Circuit Breaker (VCB)
Phase Configuration	Three-phase

Certification and Standards

Core Capabilities	Overcurrent Protection, Short Circuit Protection, Vacuum Arc Extinguishing
