

Industrial Valves for Chemical Applications

These industrial valves are designed for chemical processing systems. They feature various handle types and body materials suitable for controlling fluid flow.

Overview

Industrial Fluid Control Solutions

These industrial valves are engineered specifically for demanding chemical processing environments. Featuring a versatile range of handle configurations and durable construction materials, they provide reliable flow control for various fluid systems. Their robust design ensures longevity and consistent performance in complex industrial applications.

Technical Specifications

Handle Configurations

- Lever handles (Yellow, Blue)
- Multi-spoke handles (Red, White)
- Push-pull handle (Chrome)

Material Composition

Green Plastic, White Plastic, Metal Components

Applications

Primary Application

Chemical processing systems and fluid flow control
