

Industrial Vibratory Motor for Screens and Feeders

This heavy-duty industrial vibratory motor is suitable for various applications such as vibrating screens, feeders, and compactors. It features adjustable eccentric weights for precise control of vibration force and an enclosed design that protects internal components.

Overview

Heavy-Duty Vibratory Motor

This industrial vibratory motor is engineered for reliable performance in demanding environments, making it an ideal solution for vibrating screens, feeders, and compactors. It features a robust, enclosed design that effectively protects internal components from dust and moisture. With adjustable eccentric weights, operators can achieve precise control over vibration force, ensuring optimal efficiency during continuous operation.

Performance

Operation Mode

Continuous Operation

Vibration Control

Adjustable eccentric weights for precise force control

Design & Build

Suitable Applications

- Vibrating Screens
- Feeders
- Compactors

Protection Features

Dust-proof, Moisture-resistant, Enclosed Design
