

# Industrial Washing Machine

This automatic industrial washing machine is designed for heavy-duty laundry applications. It features a robust stainless steel construction, programmable controls, and a high-capacity drum for efficient cleaning.

## Overview

### Industrial-Grade Performance

This industrial washing machine features a robust, fully-enclosed stainless steel construction designed for maximum durability and corrosion resistance. Equipped with programmable microcomputer controls and variable frequency drive technology, it offers high-degree automation with flexible cycle customization. Ideal for commercial settings, it incorporates advanced vibration-dampening technology and multi-stage heating options to deliver consistent, professional-grade results across diverse working conditions.

## Technical Specifications

Vibration Reduction Efficiency	98 %
Dry Slanting Load Resistance	40 %
Heating Configurations	Steam, Hot Water, Electricity

## Key Features

### Operational Features

- Programmable microcomputer control
- Anti-creasing function
- Water reuse capability
- Automatic feeding system
- Variable frequency drive for quiet operation

## Construction

### Material Composition

Stainless Steel Tank • Fluorine Plastic Sealed Mainshaft

## Safety & Compliance

### Safety Systems

- Door lock linkage control
- Pneumatic water level detection
- Isolation leakage protection
- High-temperature acid/alkaline seal resistance
