

# Industrial Wastewater Belt Filter Press

This belt filter press is advanced equipment designed for solid-liquid separation in industrial wastewater. It is suitable for use in cleaned coal, tail coal, metallurgical sludge, paper making, and chemical industries.

## Product Overview

### Industrial Wastewater Belt Filter Press

The Industrial Wastewater Belt Filter Press is a high-performance solution designed for efficient solid-liquid separation. Ideal for coal washing, metallurgical sludge, and chemical waste management, this unit features a compact footprint and continuous operation. Its automated systems and closed-circuit washing capabilities minimize environmental impact while maintaining low noise and energy consumption.

## Key Features

### Operational Advantages

- Continuous operational flow
- Automatic system adjustment
- Low noise operation
- Compact land usage
- Energy-saving design
- Simplified maintenance protocols

## Application Suitability

### Suitable Industries

Coal Washing, Metallurgical Processing, Paper Manufacturing, Leather Production, Chemical Industry

## Technical Standards

### Environmental Features

Closed-circuit water circulation • Pollution reduction design
