

Industrial Water Chiller

This industrial water chiller unit is designed for purification, filtration, and water processing. The robust chiller features a dual-compressor system and a horizontal cylindrical design.

Product Overview

Industrial-Grade Temperature Control

This industrial water chiller is engineered for high-performance water processing, purification, and filtration applications. Featuring a robust dual-compressor system, it ensures precise temperature regulation in heavy-duty environments. The unit is designed with a horizontal cylindrical architecture and multiple inlet/outlet ports to optimize efficient water circulation.

Technical Specifications

Compressor Configuration	Dual-compressor system
Physical Design	Horizontal cylindrical

Safety and Standards

Safety Compliance	Safety Warning, Operational Alert, Caution Protocols
-------------------	------------------------------------------------------

Operational Capabilities

Performance Features

2 units Compressor Count	1 Integrated Control Panel
