

Industrial Water Chiller Unit

This industrial water chiller unit is designed for refrigeration and ventilation applications. It provides chilled water for various industrial processes and HVAC systems.

Product Overview

Industrial Water Chiller Unit

This high-performance industrial water chiller is expertly engineered for demanding refrigeration and ventilation applications. Designed with a robust screw compressor and precision-engineered evaporator and condenser systems, it ensures consistent chilled water supply for complex industrial processes. Its sturdy, integrated frame construction guarantees stable, reliable operation within both HVAC systems and heavy-duty manufacturing environments.

Technical Architecture

Key Components

- Horizontal cylindrical evaporator
- Horizontal cylindrical condenser
- Screw compressor
- Integrated control panel
- Reinforced structural frame

Application

Suitable Applications

HVAC Systems, Industrial Cooling, Process Refrigeration, Ventilation Support
