

Industrial Water Chiller Unit for Cooling Processes

This industrial water chiller unit is designed for refrigeration and ventilation applications. It features a control panel with a digital display and pressure gauges for monitoring system performance.

Product Overview

Industrial Cooling Performance

This industrial water chiller unit is engineered for demanding cooling processes within various industrial settings. It features a rugged, durable enclosure designed for longevity and includes integrated ventilation grilles to ensure optimal heat dissipation. The system is equipped with an intuitive digital control panel and precision pressure gauges, providing operators with immediate visibility into system performance and efficiency.

Technical Features

Construction

Industrial Grade • Ventilated Enclosure

Control System

Digital Display, Integrated Pressure Gauges

Applications

Primary Applications

- Refrigeration
- Ventilation
- Process Cooling
