

Industrial Water Chiller Unit for Cooling

This industrial water chiller unit is designed for efficient heat exchange and cooling applications. It incorporates a compressor, insulated piping, and a cylindrical heat exchanger mounted on a sturdy frame.

Overview

Industrial Cooling Solution

This industrial water chiller unit is engineered for high-efficiency heat exchange and consistent cooling performance in demanding industrial environments. The system features a robust compressor, fully insulated piping, and a durable cylindrical heat exchanger mounted on a sturdy frame. Equipped with an integrated control panel, pressure gauges, and clear indicator lights, it provides reliable operation for various industrial cooling processes.

Technical Specifications

Key System Components

- Robust industrial-grade compressor
- Cylindrical heat exchanger
- Insulated piping system
- Integrated control panel with display screen
- Manual pressure gauges
- Status indicator lights
- Heavy-duty mounting frame

Suitable Applications

Industrial Cooling, Heat Exchange, Process Temperature Control

Safety & Compliance

Safety Indicators

Warning Labels • Pressure Monitoring
