

Industrial Water Purification System

This system is designed for large-scale water treatment. It is suitable for industrial or municipal applications.

System Overview

Industrial Water Purification Solution

This industrial-grade water purification system is engineered for large-scale operations, providing robust filtration and treatment capabilities. Designed with durable vertical cylindrical tanks and an integrated piping network, it is built to perform in demanding outdoor industrial or municipal environments. The system facilitates high-capacity water processing to meet professional standards for quality and reliability.

Technical Configuration

Materials

- Reinforced cylindrical tanks
- High-pressure piping network
- Corrosion-resistant outer coating

Design Type

Modular vertical cylindrical tank configuration

Installation

Outdoor, Industrial, Municipal
