

Industrial Water Purification System

This industrial water purification system utilizes multiple filtration stages for effective contaminant removal. It incorporates membrane filtration modules, a high-pressure pump, flow meters, and a control panel.

System Overview

Industrial Purification Excellence

This industrial water purification system is engineered for high-efficiency impurity and contaminant removal across diverse water sources. It features a robust multi-stage filtration design incorporating advanced membrane modules and a high-pressure pump system. Designed for precision, it includes an integrated control panel for real-time monitoring and seamless process parameter adjustments.

Technical Specifications

Core Components

- Membrane filtration modules
- High-pressure pump with motor
- Integrated flow meters
- Digital control panel

Filtration Stages	3 stages
--------------------------	----------

Construction

System Design

Industrial Grade • Modular Configuration • High-Pressure Optimized

Construction Materials	Stainless Steel, PVC
-------------------------------	----------------------
