

Industrial Water Storage Tank

This tank is constructed from stainless steel 304 or 316L, or carbon steel. Inlet/outlet and manhole are custom made to meet specific requirements.

Product Overview

Industrial Water Storage Solutions

This industrial-grade storage tank is precision-engineered for reliable fluid management in demanding professional environments. Built with high-quality stainless steel, the structure ensures superior corrosion resistance and hygiene for various liquid storage applications. The design features a robust cylindrical body supported by a stable three-leg configuration, optimized for both process water and potable liquid storage.

Technical Specifications

Surface Finishing

- Outer: Polished, sand blast, paint coated
- Inner: Polished, rubber lining

Structural Design

Cylindrical Body • Top-mounted Access Port • Three-leg Support

Capacity and Sizing

Custom made to meet specific project requirements

Material Composition

High-grade Stainless Steel, Rubber Lining
