

Industrial Welding Machine

This welding machine is widely used in the automotive, motorcycle, agricultural, and engineering machinery industries. It is suitable for various hardware welding applications.

Overview

Versatile Industrial Welding Solution

This industrial welding machine is engineered for high-performance applications across automotive, agricultural, and engineering sectors. It supports multiple welding processes including MIG, TIG, and stick welding, providing exceptional versatility for diverse hardware fabrication tasks. Designed for professional environments, it features a robust cooling system and advanced digital controls for precise parameter management.

Technical Specifications

Supported Processes	MIG, TIG, Stick Welding
Control Interface	Digital control panel
Cooling System	Yes

Safety & Design

Safety Features

- Overload protection
- Thermal shutdown

Mobility	Integrated wheels for workshop maneuverability
----------	------------------------------------------------

Application Fields

Primary Applications

Automobiles • Motorcycles • Agricultural Machines • Engineering Machines • Hardware Welding
