

Industrial Welding Machine

This heavy-duty welding machine is designed for industrial applications. It features a wire feeder, control panel, and robust construction for reliable performance.

Overview

Industrial-Grade Precision

This heavy-duty welding machine is engineered specifically for demanding industrial environments. Designed for reliability and consistent performance, it features an integrated wire feeder and a high-precision control panel to ensure high-quality results across various welding processes. Its robust construction makes it an ideal solution for professionals requiring stable and repeatable output in tough work conditions.

Performance

Rated Current

500 A

Maximum Output

Technical Specifications

Model Identification	NBC-500-1
Equipment Type	Industrial Welding, Wire Feed System

Features

Core Features

- Integrated heavy-duty wire feeder
- Advanced manual control panel
- Robust reinforced chassis
- High-precision output control
