

Industrial Welding Machine with IGBT Inverter

This heavy-duty welding machine is designed for industrial applications. It features adjustable current and voltage controls, IGBT inverter technology, and CO2/MAG welding capabilities.

Product Overview

Industrial-Grade Welding Solution

This industrial welding machine features advanced IGBT inverter technology for consistent, high-performance output in demanding environments. Designed for professional use, it supports precise CO2 and MAG welding applications with adjustable current and voltage controls. The soft-switch inverter architecture ensures robust operation, making it a reliable choice for heavy-duty industrial tasks requiring high precision and durability.

Technical Specifications

| | |
|--------------------|--------------------------------------|
| Welding Capability | CO2 Welding, MAG Welding |
| Core Technology | IGBT Inverter / Soft-Switch Inverter |
| Model Number | NB-500 |
