

Industrial Welding Power Supply System

This heavy-duty welding power supply system is designed for industrial applications. It features multiple power modules configured for high current output and supports multiple welding stations.

Overview

Industrial Welding Power Supply System

This heavy-duty welding power supply system is engineered specifically for demanding industrial applications. The unit features a modular design that supports high-current output and is housed in a robust, ventilated enclosure built to withstand harsh operating environments. With its flexible configuration, it provides independent control and monitoring capabilities, making it an efficient solution for high-performance welding workflows.

Technical Features

System Architecture	Modular parallel operation
Housing Build	Robust, Ventilated, Industrial-Grade

Operational Capabilities

Control Features

- Independent module control
- Real-time monitoring
- Parallel output terminals

Welding Station Capacity	Multi-station supported
