

Infrared Microwave Oven for Kitchen Use

This is an infrared cooker designed for kitchen use and categorized as a microwave oven. It features an infrared heating element, digital display, and control panel with multiple buttons for various cooking tasks.

Product Overview

Professional Infrared Cooking Solution

This high-end infrared kitchen appliance features an advanced microcomputer control system designed for maximum cooking efficiency and safety. Equipped with comprehensive protections against overheating and voltage fluctuations, it provides a reliable solution for various culinary tasks including frying, boiling, and BBQ. Its versatile design supports a wide range of flat-bottomed cookware, making it an essential tool for high-performance commercial and household kitchens.

Technical Specifications

Power Output

2000 W

Rated Power

Electrical Requirements

220V, 50Hz

Safety & Control

Control Features

- Microcomputer control system
- Overheating protection
- High and low voltage protection
- Electromagnetic radiation shielding

Compatibility & Usage

Cooking Capabilities

Frying • Boiling • BBQ • Insulation

Cookware Requirements

Compatible with all high-temperature resistant, flat-bottomed cooking utensils.
