

Infrared Motion Sensor Night Light

This infrared night light is designed for automated illumination in low-light conditions. It features an infrared sensor that detects movement, activating the LED light source for enhanced visibility and safety.

Product Overview

Smart Infrared Illumination

This infrared night light series is engineered for automated, hands-free illumination in low-light environments. Utilizing advanced infrared sensor technology, the unit detects motion to trigger the LED light source, enhancing safety and visibility during nighttime hours. Its compact, unobtrusive design makes it an ideal solution for hallways, bedrooms, and other indoor spaces requiring subtle, energy-efficient lighting.

Technical Specifications

Part Number	ZJ-808-W-2707-A
Sensor Technology	Infrared (PIR)
Light Source	LED

Features

Key Features	Motion Activated, Energy Efficient, Compact Design, Automated Illumination
--------------	--

Application

Recommended Locations

- Hallways
- Bedrooms
- Indoor residential spaces
- Low-light areas
