

Injection Molding Machine

This injection molding machine is a high-performance, energy-efficient solution for plastic processing. Its advanced hydraulic and control systems ensure precise and repeatable molding operations.

ADDITIONAL IMAGES

Overview

Next-Generation Injection Molding

This new generation injection molding machine delivers enhanced power through improved motors and intelligent motion control. It offers high precision across diverse applications, including consumer goods, toys, and construction. With a closed-loop injection unit and energy-efficient design, it balances high production quality with economic performance.

Key Features

Performance Metrics

1200 kN

Clamping Force

400 cm³

Injection Capacity

Machine Capabilities

Energy Efficient, Closed-loop Injection, Intelligent Motion Control, Smart Manufacturing Ready

Technical Specifications

Application Fields

- Consumer Goods
- Toys
- Construction

Connectivity

Open Interfaces • Smart Manufacturing Integration
