

Injection Moulding Component

These injection moulding components are designed for creating parts. The components are made of smooth, white plastic.

Product Overview

Precision Injection Moulding Component

This injection moulding component is engineered for high-precision manufacturing applications. Crafted from a smooth, high-quality white plastic material, the component is designed to facilitate the creation of elongated and tapered parts with consistent accuracy. Its clean, wear-free finish ensures optimal performance and reliability in industrial moulding processes.

Physical Characteristics

Surface Finish

Smooth • Clean

Material

High-grade industrial plastic

Design Geometry

Elongated, Tapered

Compatibility

Application

Injection Moulding
