

Inlaid Segment Diamond Core Bit with Side Diamond Coating

This core bit features inlaid segments for efficient material removal and is enhanced with side diamond-coated spots for increased durability and cutting performance. The robust construction ensures long-lasting use in demanding applications.

Product Overview

Inlaid Segment Diamond Core Bit

This advanced diamond core bit features a specialized inlaid segment design engineered for efficient material removal during drilling operations. Enhanced with side diamond-coated spots, the tool offers superior durability and consistent cutting performance. Its robust construction is built to withstand demanding applications, ensuring clean, precise cuts and long-lasting reliability for professional drilling tasks.

Technical Specifications

Applications

- Demanding drilling environments
- Clean hole cutting
- Professional construction tasks

Key Features

Inlaid Segments, Side Diamond Coating, High Durability, Precision Cutting
