

Insulated Aluminum HVAC Duct

This flexible duct connects HVAC equipment to ductwork. Its insulated design maintains efficient airflow while minimizing temperature variations.

Product Overview

High-Performance Insulated HVAC Ducting

This flexible insulated aluminum duct is engineered for efficient air distribution in central air conditioning and fresh air systems. Featuring a reinforced aluminum foil inner layer and high-quality rock wool insulation, it provides excellent thermal performance while maintaining fire-retardant properties. Its flexible design with a built-in expansion tube allows for easy installation around obstacles and in confined spaces, making it an ideal solution for residential and commercial HVAC applications.

Technical Specifications

Diameter	200 mm
Insulation Material	Rock wool
Key Features	Flexible, Fire Retardant, Reinforced Aluminum Foil, Built-in Expansion Tube

Applications

Primary Applications

- Central air conditioning
- Fresh air systems
- Ventilation systems
- Exhaust systems
