

Insulated Aluminum HVAC Ducting

This flexible aluminum duct is designed for central air-conditioning systems. It features multi-layered construction with insulation to provide thermal regulation and reduce noise transmission.

Product Overview

High-Performance HVAC Ducting

This insulated aluminum HVAC ducting is engineered for efficiency in central air conditioning and fresh air systems. Featuring a reinforced aluminum foil construction with integrated rock wool insulation, it provides excellent thermal regulation and fire retardant properties. The design includes a built-in expansion tube that allows for flexible bending, making installation straightforward across various commercial and residential layouts.

Technical Specifications

Diameter	200 mm
Insulation Material	Rock wool
Outer Layer	Fiberglass cloth (wear-resistant and anti-corrosive)

Features

Key Features	Flexible, Fire Retardant, Thermal Insulation, Reinforced Construction
--------------	---

Applications

Recommended Applications

- Central air conditioning systems
- Fresh air ventilation systems
- Residential HVAC
- Commercial HVAC
