

Insulated Electrical Wire for Fixed Installation

This electrical wire is designed for fixed installation in buildings. It consists of insulated conductors within a protective jacket, suitable for dry locations.

Product Overview

Professional Fixed Installation Wiring

This BVVB electrical wire is engineered specifically for reliable fixed installation in both residential and commercial environments. Featuring multiple insulated conductors encased in a durable protective outer jacket, it ensures robust performance and safety in dry locations. Its construction provides excellent resistance to environmental factors, making it an ideal choice for long-term, secure electrical infrastructure.

Technical Specifications

Construction Features

- Multiple insulated conductors
- Protective outer jacket
- Durable construction
- Environmental resistance

Cable Type	BVVB
Recommended Environment	Residential, Commercial, Dry Locations, Fixed Installation

Compliance & Quality

Durability

High Durability • Environmental Resistant
