

Insulating Electrical Fitting Hardware

Insulating fitting hardware provides secure and reliable connections for diverse electrical applications. These fittings ensure electrical isolation and are suitable for use with insulated conductors and cables in electrical networks.

Product Overview

Reliable Electrical Insulation

These insulating fitting hardware components are engineered for secure and reliable connections in overhead power lines and distribution systems. Designed to provide essential electrical isolation, they ensure the integrity and safety of electrical networks. Their durable construction offers robust resistance to corrosion and harsh environmental factors, guaranteeing long-term performance.

Technical Specifications

Included Components

- Suspension clamps
- Dead-end clamps
- Specialized connectors

Application Types

Overhead Power Lines, Distribution Systems, Insulated Conductors, Cables

Performance & Durability

Environmental Resistance

Corrosion Resistant • Weather Resistant • High Durability
