

Integrated Circuit Smart Card

This integrated circuit smart card is designed for secure data storage and processing. It is suitable for applications requiring authentication and secure transactions.

Product Overview

Integrated Circuit Smart Card

This high-performance integrated circuit smart card is designed to meet rigorous B2B security and identification standards. Featuring a refined copper-based construction, the card offers both structural durability and reliable electrical conductivity. It is an ideal solution for professionals requiring advanced authentication and data management capabilities.

Technical Specifications

Material Composition	Copper
Surface Finish	Polished
Form Factor	Cylindrical

Certifications & Compliance

Compliance	ISO Certified, Industrial Grade
