

# Integrated Power Supply System for Photovoltaic Applications

The integrated power supply system is designed for photovoltaic applications, efficiently converting and managing solar energy. It features a user-friendly interface with intuitive controls for easy monitoring and adjustment of settings.

## ADDITIONAL IMAGES

## Overview

### Integrated Photovoltaic Power Solution

The GP-20000 is a robust, integrated power supply system specifically engineered for photovoltaic applications. It combines energy conversion and storage capabilities into a single, mobile unit designed for reliability and ease of use. Featuring an intuitive interface with an LCD screen and LED indicators, this system provides a stable and efficient power solution for diverse solar energy projects.

## Technical Specifications

Model Number	GP-20000
Primary Application	Photovoltaic Systems, Solar Energy Storage, Energy Conversion

## Design & Build

### Mobility

Integrated Wheels • Portable Design

### Enclosure Features

- Robust housing
- Integrated ventilation system
- LCD display screen
- LED status indicators
- User-friendly control interface

## Performance

### System Performance

**20000 W**

System Capacity Reference
