

Integrated Throttling Flowmeter

Integrated throttling flowmeter combines the display instrument, differential pressure transmitter, and flow measurement throttling device into one unit. This device is designed for use with differential pressure transmitters and display instruments in industries like steel.

钢铁等行业得到广泛应用。其设计包括高压变送器、显示仪表等配置使用。安装使用和维护都非常方便。将一体化节流式流量计算机解决方案集成于一体。包括将显示仪表输入与流量变送器并安装集成于一体。使其具

Product Overview

Integrated Throttling Flowmeter Solution

The Integrated Throttling Flowmeter is engineered to streamline industrial flow measurement by combining the display instrument, differential pressure transmitter, and flow measurement throttling device into a single, cohesive unit. This design eliminates the complexities and inconveniences typically associated with separate installations. It is specifically optimized for demanding environments, such as the steel industry, where reliability and ease of use are critical.

Design & Features

Design Philosophy

Integrated System • Single-Unit Design • Simplified Installation

Primary Industries

Steel Industry, Liquid Processing, Gas Measurement

System Components

Included Components

- Display Instrument
- Differential Pressure Transmitter
- Flow Measurement Throttling Device
