

Integrated Water Purification System

This integrated system provides efficient water treatment through multiple filtration and purification stages. Its modular design allows for customization and expansion, making it suitable for various applications.

Overview

Integrated Water Purification System

This integrated water purification system is engineered for high-efficiency water treatment across industrial, municipal, and commercial sectors. The unit features a modular design that facilitates easy expansion and customization to align with specific quality requirements. Constructed from durable materials, the system is designed to provide long-lasting performance with minimal maintenance needs.

Technical Specifications

Filtration Stages

- Pre-filtration
- Clarification
- Disinfection

System Design

Modular • Customizable • Durable

Suitable Applications

Industrial, Municipal, Commercial
