

Interactive Whiteboard System

This interactive whiteboard system transforms any surface into an interactive display. It includes a compact sensor unit that connects to a computer via USB and a stylus pen for writing and interacting with the projected image.

Product Overview

Interactive Whiteboard System

This interactive whiteboard system is designed to transform any standard projection surface into a fully interactive display. Ideal for professional presentations, collaborative meetings, and educational environments, the system utilizes a compact sensor unit to track movement. The included stylus pen provides precise input capabilities, effectively emulating mouse functionality for seamless navigation and writing.
